Coral Racing Ltd. have opened their brand new retail space at Westfield Stratford City, the Official Shopping Centre of London 2012. Situated at the gateway to the Olympic Park, Fisch Design were appointed to create and implement the project with a designed brief utilising LED luminaires throughout. Due to a solid history of producing results, Fisch worked alongside leading UK Design and Manufacturer, Hacel Lighting, to provide an inspired LED specification.

**Solara Slim LED Downlighters** were the perfect choice for general lighting; combining highest performance design features and speed of installation. **Asara Adjustable LED Downlighters** provide innovative, accent lighting, adding dimension and depth to the space. **Arill Adjustable LED Downlighters** were integrated into the lighting design to provide directional light and maximise key areas. All LED luminaires were selected and recognised for their outstanding performance characteristics and cutting edge design. The latest innovation in LED lighting from Hacel showcases energy efficiency, life expectancies in excess of 50,000 hours and reduced maintenance.

Maninder Lloyla, Creative Director at Fisch Design commented: 'We've worked with Hacel on many projects now and they always work quickly and cost efficiently on every project no matter how tight the deadline. Getting the lighting right was particularly important at Coral Westfield as there was a large number of TV monitors and reflective surfaces to contend with, but Hacel understood the brief and came up with a scheme that complimented the design perfectly.'
